The **Shift To Immersive Storytelling**

The traditional toolkit of lookbooks and static banners is failing to engage.

Leading brands are shifting from **show to story**, moving beyond product-led ads to experience-led journeys.

The new edge lies in **making fashion storytelling highly contextual** to cultivate meaningful relationships with the audience.

Closing the **Personalisation Gap** in Fashion Ads

→ **74%** feel frustrated by non-personalised ads

→ **62%** lose loyalty over irrelevant messaging

→ **76%** crave personalisation, but only **32%** of marketers deliver

Closing the gap requires intent, using data to craft stories that resonate and feel personal.

Fashion Ads That **Spark Action**

Relevance isn't about reaching more people, it's about reaching them at the right moment.

Dynamic Creative Optimization

Adapt by region, culture, or time of day

Festive campaigns flow seamlessly from **story to 'shop-the-look'**.

QR Led Shoppable Ads

They **turn engagement into instant action**.

According to a VDO.AI report, fashion ads on **CTV achieve ~97% completion rates**, with **67% of top campaigns powered by DCO**.

Fashion Ads, **Reimagined**

Fashion's new runway is digital, where immersive storytelling turns ads into curated experiences that are remembered, not scrolled past.
